

EXTENSION

EXTENSION, INC. is the developer of the EXTENSION® Solution Suite (ESS). The EXTENSION Solution Suite of software expands Cisco Unified Communications into a clinical workflow tool automating notifications using text messages, phone calls, and emails, as well as turning Cisco's award-winning IP Phones into user interfaces for clinical, administrative, and revenue cycle data.

Our Digital Physicians Office (DPO) is a combined Cisco, Allscripts and EXTENSION solution designed for the ambulatory space. By implementing this healthcare technology solution, small medical practices can take advantage of a fully integrated Allscripts MyWay EMR application and Cisco UC voice and data system and can realize greater ROI from these significant investments.

EXTENSION also developed the HealthID™ patient smart card solution that provides encryption and identity management, integration to personal health records, and workflow improvements for patients, hospitals, and clinics. Our pre-packaged smart card solution provides fast and accurate patient identification and information exchange and is currently powering the largest healthcare smart card program in the U.S. at Mount Sinai Health System in New York. We are proud to say that our smart card solution earned the exclusive endorsement for smart cards from the American Hospital Association.
